

Cabot Strait Voluntary Slowdown

April 19 – June 27 + September 27 – November 15, 2023

Mariners play a crucial role in reducing North Atlantic Right Whale mortalities.

Cabot Strait is an essential migratory corridor for Right Whales to access the Gulf of St. Lawrence, where they feed and socialize.

You can help prevent a lethal collision by reducing your vessel speed to no more than 10 knots.

Between 2017 and 2022, there were 21 North Atlantic Right Whale deaths observed in Canadian waters, of which at least 7 were a result of collisions with vessels. To **help prevent a lethal collision** with these critically endangered whales, Transport Canada is asking vessels transiting through Cabot Strait to **voluntarily slow down to 10 knots** or less over the ground, when safe

Why are you being asked to slow down to 10 knots or less?

A 10 knot speed limit is designed to achieve a balance between safe navigation and reduced risk of lethal collisions with Right Whales when they are migrating through Cabot Strait.

When is the voluntary slow down in effect?

Between April 19 and June 27, and again between September 27 and November 15. Right Whales migrate in and out of the Gulf of St. Lawrence through Cabot Strait.

Cabot Strait Voluntary Slowdown Area

April 19 – June 27 + September 27 – November 15, 2023

Additional Transit Time (10 knots/70 nm)

AVERAGE VESSEL SPEED (AVS)	AVERAGE ADD'L TIME
Container Ships (AVS 15 knots) =	2.3 hours (or 3.1 hours at 18 knots)
Bulk Carriers (AVS 12 knots) =	1.2 hours
Tankers (AVS 12 knots) =	1.2 hours
RO-RO & Ferry Vessels (AVS 18 knots) =	3.1 hours

What else is being done to protect Right Whales in the Gulf?

Vessel strikes and fishing gear entanglement are the leading causes of death for North Atlantic Right Whales. Additional mandatory static and dynamic

measures are in place in other areas of the Gulf of St. Lawrence. Vessels must comply with these speed restrictions at all times. For general information on mandatory measures, see Transport Canada's Ship Safety

Bulletin 05/2023. For the status of dynamic measures,

see Navigational Warnings (NAVWARNs).
